

SERVICE RELIABILITY MONITORING & ANALYSIS

This project analyzes the Chicago Transit Authority's (CTA) bus and train service reliability using live and historical alert data. It provides a real time view of current service status across all routes, along with a persistence analysis that flags routes stuck in an unchanged status for extended periods. An 8 day historical view is included to uncover patterns in delays, disruptions, and affected routes over time broken down separately for bus and train service to highlight routes and time of day trends. The project concludes with a set of data driven recommendations, connecting these findings to CTA's own stated goals and financial constraints as outlined in its FY2026 Budget Book.

Overall

- CTA's system health is 60.7%
- Disruption rate is 39.3% & delay rate is 1.9%.

- Disruption rates are not delays, they should be tracked and communicated separately depending on their severity level.

- Use clear status categories in rider-facing displays.
- Improve rider understanding of service impact and help operations interpret each status more clearly.

Bus Delay Rate

- Bus delay rate is 2.0%
- Peak delays: 5-6 AM & 6-7 PM
- Highest day period: Afternoon | Highest day: Saturday
- Top 3 routes: Blue Island/26th, Jackson 26, Outer DuSable Shore Express

- Delays are concentrated in specific periods and routes, indicating areas for targeted investigation.

- Investigate traffic, running time, bunching, and operator/fleet availability.
- Prioritize affected routes and periods in CTA's running-time review for targeted improvements.

Train Delay Rate

- Train delay rate is 0.8%.
- Peak delays is 10 AM, 4 PM & 7 PM.
- Highest day period: Afternoon | Highest day: Wednesday
- Top 3 train lines: Blue, Green & Pink

- Delays are concentrated on specific lines and time periods, indicating areas for targeted investigation.

- Investigate slow zones, running time, and other operational factors.
- Compare affected lines and peak periods with CTA's slow-zone elimination work to reduce delays.

Route Statuses

- High disruption-alert volumes on certain routes may indicate recurring service issues.

- Recurring alerts may have operational or external causes.

- Prioritize high-alert routes for root-cause analysis.
- Focus on reducing recurring service disruptions, not the number of alerts reported.

DATA DICTIONARY

Column Name	Data Type	Description	Key	Table Name
BusRouteID	Text	Unique identifier for each bus route	PK	BusRoute
BusRouteName	Text	Name of the bus route	-	BusRoute
DateID	Date	Unique identified used to link records to the Calendar table	PK	Calendar Dim
MonthName	Text	Full name of the month	-	Calendar Dim
MonthNumber	Whole Number	Numeric representation of the month (1-12)	-	Calendar Dim
MonthShortForm	Text	3 letter abbreviation of the month, used for concise reporting & visualizations	-	Calendar Dim
Quarter	Whole Number	Quarter of the year (Q1-Q4)	-	Calendar Dim
Weekday	Text	Name of the day of the week	-	Calendar Dim
WeekdayShortForm	Text	Abbrevated name of the day of the week, used for concise reporting & visualizations	-	Calendar Dim
WeekNumber	Whole Number	Week number of the year	-	Calendar Dim
Year	Whole Number	Calendar year of the date	-	Calendar Dim
AlertID	Whole Number	Unique identified for each alert record	PK	Historical Alerts Fact
AlertSeverityRange	Text	Severity level associated with the alert eg 0, 1-19, 20-39	-	Historical Alerts Fact
BusRouteID	Text	Links each alert to the BusRoute table	FK	Historical Alerts Fact
DateID	Date	Links each alert to the Calendar table	FK	Historical Alerts Fact
HourID	Whole Number	Links each alert to the Time table	FK	Historical Alerts Fact
RouteStatus	Text	Status of the route at the time of the alert	-	Historical Alerts Fact
RouteStatusCategory	Text	Category grouping assigned to the route status	-	Historical Alerts Fact
SystemwideRouteID	Text	Links each alert to the SystemwideRoute table	FK	Historical Alerts Fact
Time	Time	Timestamp indicating when the alert occurred	-	Historical Alerts Fact
TrainRouteID	Text	Links each alert to the TrainRoute table	FK	Historical Alerts Fact
